

Errata

“EachMovie: archaeology of a first latent recommender system”

JOHN DETREVILLE

Factual errata

In the published proceedings of ACM RecSys 2026, my paper “EachMovie: archaeology of a first latent recommender system” [2] includes two small mistakes, corrected here.

- (1) The published paper references a “permanent” EachMovie artifact repository at the Center for Open Science. Shortly *after* the paper’s camera-ready deadline, though, the Center announced they can no longer host such repositories. That repository now contains permanent forwarding pointers to two fresh repositories on GitHub [3] and Zenodo [4].
- (2) The published paper says the EachMovie patent [1] was issued June 30, 2000, but that should be June 20, 2000. (United States patents are issued on Tuesdays, not Fridays.)
